

# MOBILIZE YOUR ENTERPRISE WITH TELERIK SOLUTIONS

Work doesn't just happen in the office. Technology is changing the way organizations operate. Today's business environment requires your employees to take action and deliver results from anywhere with mission-critical enterprise applications. IT is under pressure to create a large number of great mobile apps that increase productivity and provide secure data access in the fastest time possible. The most successful enterprises will be the ones that empower their workforce and increase productivity with mobile apps that enable anytime, anywhere access to information.

However, developing quality applications is difficult. Mobile fragmentation significantly challenges developers to create the same experience across many platforms and devices. As a result, they spend significant time and resources on user interface (UI) issues.

## **Mobile App Development Made Easy**

Telerik® enables end-to-end application development for enterprises with a rich set of UI tools and powerful cloud services. Our platform empowers developers to build integrated applications over multiple backend systems, including SAP, Salesforce, Oracle, MongoDB and so on. Security is inherent to the Telerik cloud infrastructure and trusted by our 130,000+ customers. Additionally, Telerik Backend Services integrates with multiple backend ERP applications, including Salesforce, SAP and Oracle. Our easy-to-use interface enables developers to create a rich application with existing data.

Today, more than 450 of the Fortune 500 companies and 1.4 million developers rely on Telerik solutions to create compelling and secure experiences across web, mobile and desktop applications for their employees and customers.

## Design

Telerik delivers the industry's best UI tools to help enterprises build modern and user-friendly apps with a fraction of the effort.

Telerik Kendo UI® Professional suite is everything developers need to build modern apps with HTML5 and JavaScript. Built from the ground up, it delivers the ultimate app performance.

## Development

Telerik Platform™ solution enables your development team to build, connect, test, deploy and analyze cross-platform mobile apps.

Our end-to-end, modular platform enables enterprises of all sizes to go way beyond applications and create engaging, transformative experiences that drive business.

## Testing

Telerik Test Studio® solution catches bugs before customers do. The solution offers an intuitive interface for automated testing.

The Test Studio solution includes a number of valuable features, such as functional UI testing, load testing, mobile testing, browser testing and performance testing.

# Key Features

## Security

At Telerik, we realize how important security is for you. Telerik Platform solution is equipped with a robust set of security measures to encrypt and securely transport data. Using the 128-bit SSL protocol, Telerik Platform solution encrypts all communications, including service calls made between customer apps and Telerik Platform services. Telerik complies with the following standards: OWASP Top 10, CME/SANS 25, Safe Harbor Certification and Veracode Level 4 Rating. Additionally, Telerik adopts a number of measures to secure customer data, including but not limited to dynamic code analysis and vulnerability testing, static code analysis, quality assurance, architecture and infrastructure security, SSO support, service level agreement and OAuth authentication.

## Offline Apps

Your employees and customers don't always have access to a network connection on-the-go. Create apps that save and track data changes while offline, then synchronize with remote data storage when reconnected. Apps built with Telerik solutions support offline access. Telerik Platform solution's advanced syncing algorithms ensure that changes made to data while offline sync with the cloud once the app reconnects.

## Rich UI Widgets

Our UI widgets provide developers with everything they need to build modern apps with a rich user interface. Telerik Platform solution is equipped with a comprehensive framework for building modern web and mobile apps with HTML5 and JavaScript. A suite of more than 70 responsive jQuery-based UI widgets, an MVVM framework, customizable themes and templates enable your developers to spend more time creating apps that delight users, and less time developing common functionality and coordinating disparate JavaScript frameworks.

## Automated Cloud Testing

Easily craft automated tests for any iOS/Android/Windows Phone 8, web and hybrid app using our cloud-based testing solution. Additionally, Telerik Test Studio® solution is the most intuitive automated testing tool in the market, enabling developers and QA engineers to catch bugs before customers do with automatic functional testing, exploratory testing, load testing and performance testing for desktop and web applications.

## Seamless Backend Integration

Extend your existing databases, security infrastructure and policies to Telerik Backend services to reduce app delivery costs and complexities. Our enterprise Backend Services leads the market with comprehensive integration features, enabling developers to integrate mobile apps with multiple backend systems such as Salesforce, SAP, Oracle and more. Backend Services is equipped with comprehensive push and email notification features, making it easy to set up and manage mobile app notifications.

## Deployment Options and Mobility Management

Telerik Platform solution gives developers the flexibility to deploy apps on a public or virtual managed cloud as well as on-premise infrastructure. Additionally, Telerik partners with the industry's leading enterprise mobility management (EMM) solution developers providing mobile device management (MDM), mobile application management (MAM) and mobile content management (MCM) capabilities (for example, Airwatch).

## Open Source

Telerik portfolio of tools and technologies provide a wide range of technology options—HTML5/JavaScript, Angular JS, ASP.NET, MVC and so on. Developers can build enterprise applications quickly, taking full advantage of rich templating and eventing features to create a fluid navigation experience with data visualizations, charts, widgets and more.

## We Help Customers Build Amazing Experiences

“ Telerik AppBuilder lets me leverage my HTML, CSS and JavaScript skills easily and effectively. If it wasn't for Telerik and its ease of use, and develop-once-and-deploy-many strategy, we would have never hit our deadlines.

**Jeff Monteforte**  
CIO  
CellepathicRx

“ The Telerik hybrid approach means we can pivot to other platforms without starting over. Telerik products should be an essential part of the toolkit of any team setting out to develop a hybrid app.

**Dan Lewis**  
Principal Consultant, Mobility  
The Judge Group

“ With help from the Telerik adaptive platform, I was able to create a cross-platform app for Android and iOS in less than a week.

**Jan-Dirk Schuitemaker**  
Technical Support Engineer  
RC International

**PHILIPS**

 **Microsoft**

**FOX**

**SONY**

**IBM**

**TOSHIBA**

**Nestlé**
