

New Era in Testing

Introducing Telerik Automated Testing Tools

Radically Better

Revolutionary Interface

Record your tests with just a few clicks.

Support for HTML/AJAX/Silverlight

Cover even the most intricate test scenarios.

Superior Test Maintenance

Abstraction and reuse of UI elements across multiple tests.

Cross-Browser Test Execution

Record tests once and run against multiple browsers.

Effortless Team Collaboration

Specialized tools for QAs and Developers who can finally work together as a team.

Highly Attractive Licensing

Fit for any company budget.

For **QAs/TESTERS**

WebUI Test Studio **QA Edition**

Record your tests with just a few mouse clicks. Save time by reusing tests and executing on multiple browsers. Automate more scenarios in less time. Get up and running in a few minutes!

- **Record tests with point-and-clicks**

Record cross-browser tests with ease and forget about writing script. Navigate, point and click is all it takes to generate even the most complex of your automated tests. The robust GUI Web Recorder saves these actions as test steps, and the unique visual storyboard gives you a visual flow of how your test has progressed.

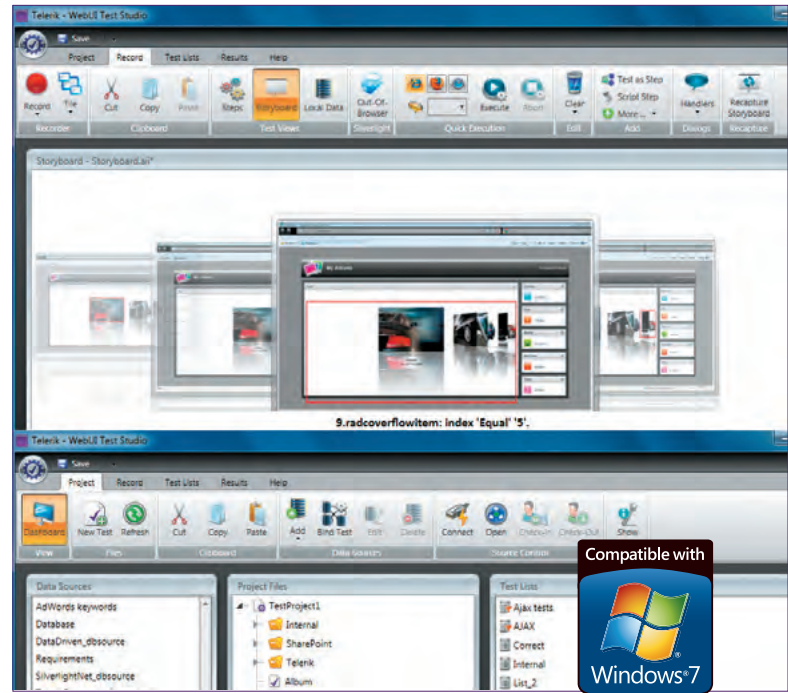

- **Revolutionary UI – now anyone can do testing**

Whether you are a QA professional or just started testing, you'll find WebUI Test Studio intuitive and enjoyable. The recorder interface is inspired by consumer handheld devices so all you need to get started is watch a couple of short videos - it's that easy!

- **No hardcoded coordinates - superior testcase maintenance**

Test maintenance is now faster and easier. Forget about hardcoded coordinates! All web page elements are abstracted out - update an element once to have the change applied to all your tests. What's more, you don't have to duplicate your tests for different browsers any more – record once in IE, playback in IE, FF, and Safari.

The powerful yet intuitive interface allows you to record tests through a series of simple wizards. You can record, execute, and edit your tests without ever leaving the the easy-to-use UI of the QA edition.

For **DEVELOPERS**

WebUI Test Studio **Developer Edition**

Build great software, and then test it with ease. Record cross-browser tests, customize them in code within Visual Studio or convert them to unit tests. Ensuring software quality has never been easier even when missing QA professionals on staff.

- **A Visual Studio plug-in built for developers**

WebUI Test Studio is a robust, developer-focused solution that gives you maximum control over your code and tests. It's where you need it most – tightly integrated in Visual Studio. Generate coded unit tests and add them to the build server. Ship quality code with every release.

- **Powerful test recorder for tremendous productivity**

Don't spend hours of time writing your tests from scratch – record them first, then tweak them in code as desired. With WebUI Test Studio you'll be far more productive. All recorded tests can be outputted in C# or VB.NET so you can program more complex verifications if you like.

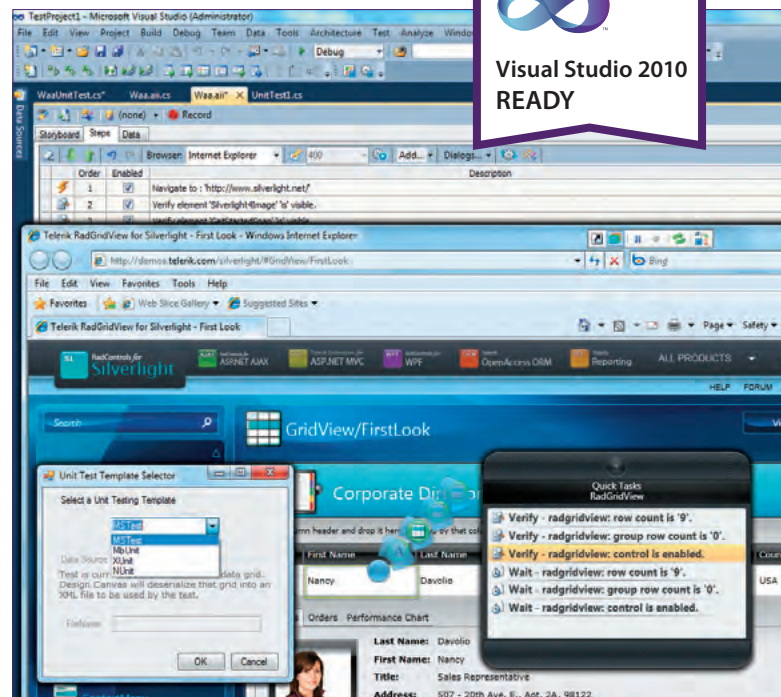

Visual Studio 2010
READY

- **Test complex HTML, AJAX, and Silverlight applications**
Automate HTML, AJAX, and Silverlight, cover elaborate scenarios like dynamic page synchronization, client-side behaviors, JavaScript validation, etc. Telerik WebUI Test Studio is the industry's first product to offer scriptless test automation for Silverlight applications.

- **Native support for Telerik controls**
If you are developing rich applications with the Telerik controls for ASP.NET AJAX and Silverlight, make sure to take advantage of WebUI Test Studio's control translators. Now you can quickly build functional tests even for complex applications built with the Telerik web controls.

The recorder automatically detects the Telerik controls, helping you select precisely the control element which you need to test. Testcase execution, management, and source control are done within Visual Studio.

For **MANAGERS**

Productivity through automation is key for achieving sustainable quality in software development projects. Telerik Testing Tools set a new benchmark for automated testing thanks to breakthrough functionality, usability and an attractive pricing model.

- **Low entry costs, high lifetime value**
Implementing automated testing technology across your team does not cost a fortune with WebUI Test Studio. And unlike the value from manual testing, which is lost after each iteration, the benefit of automated regression testing only grows as you add new tests. No manual testing shop can beat the results and ROI of Telerik's Automated Testing Tools.
- **Dramatic productivity gains**
Make your team more productive by arming them with Telerik Testing Tools. Thanks to WebUI Test Studio's cross-browser testing support and independence of screen coordinates, users don't have to re-do tests over and over again if the application changes. Moreover, efficient regression testing is

guaranteed by a number of test maintenance techniques – web element abstraction, on-the-spot validation, DOM.

- **Improved team collaboration**
Telerik WebUI Test Studio comes in two specialized editions: a standalone version for QAs, and a Visual Studio Plug-in for developers doing functional testing themselves. Both tools use the same repositories and file formats, making collaboration seamless even between geographically dispersed teams. In addition, teammates can quickly get an idea what their colleagues have already recorded through the built-in Visual Storyboard tool.

Telerik

Automated Testing Tools

Pricing & Licensing:

For **QAs/TESTERS**

WebUI Test Studio

QA Edition

Per machine with 1 year of updates and priority support

\$2,499

For **DEVELOPERS**

WebUI Test Studio

Developer Edition

Per machine with 1 year of updates and priority support

\$1,499

Bundle Offer:

WebUI Test Studio **QA Edition + Developer Edition**

The license allows you to install both editions on the same machine.

\$2,999

SharePointPro | DevProConnections

Ultimate Collection for Developers:

Includes all Telerik UI suites (ASP.NET AJAX, ASP.NET MVC, Silverlight, WPF, WinForms), developer productivity tools (Reporting, JustCode, JustMock, OpenAccess ORM), and **WebUI Test Studio Developer Edition.**
