

Telerik Reporting Datasheet

The Easiest Way to Create and Style .Net Reports

Telerik Reporting is a server-based .NET developer tool which helps in transforming business data into a format that enables business analysts to understand the condition of the business and make informed business decisions. It is a lightweight reporting platform designed to satisfy the wide variety of today's enterprise reporting needs. Featuring an intuitive report designer for Visual Studio, and a powerful API, it allows enterprises to create elegant reports with ease, and embed them directly in any .NET desktop and web applications.

OVERVIEW

There is no question about it: businesses are faced with increasing pressure to find ways to optimize their operations and improve their processes to continue delivering value and making a profit. Surviving these times and continuing to grow your business requires that you have the right information at the right time to fully understand the way your business is operating and to make important business decisions.

The key to delivering key information to decision makers in a timely fashion is reports, and reporting has become an essential activity in all successful companies. Telerik Reporting easily adapts to your business and does not disrupt your existing business processes. The product is both powerful and easy to use, with implementation costs so low, that its value to your business is guaranteed.

TOP FEATURES

- An easy to use developer tool for embedded reporting, which effortlessly fits in your existing application (Silverlight, WPF, Windows Forms and/or ASP.NET).
- Designing thorough reports is effortless with the unique capabilities of a built-in WYSIWYG report designer for Visual Studio.
- Connecting to business data is stress-free through powerful wizards and data components.
- Interactive reports with enhanced visualization capabilities provide in-depth business insight and give business analysts the freedom to explore data in a visual and interactive way.
- Outstanding performance is built-in for creating data-intensive, comprehensive dashboards and reports.
- Richly formatted reports and dashboards can be exported to the format that fits your needs: PDF, Excel, MHTML, Image, and more.

AUTHORING

Create comprehensive dashboards and reports that suit your business needs

Telerik Reporting is perfect for creating professional and comprehensive reports for an array of business needs. By using data bound items like Charts, Crosstabs and SubReports you can create interactive report decks and achieve many reporting scenarios (dashboards, sales reports and invoices, inventory reports and more), which will help your users grasp the data at once. Excel-like conditional formatting and custom meters can be used to add performance indicators to your reports for in-depth visual presentation of your data. Thanks to the specialized Barcode Report Item you can also create and add barcodes to your reports.

Quickly design reports within Visual Studio by using the innovative Report Designer

Telerik Reporting is the first reporting tool in the industry to introduce an innovative What You See Is What You Get (WYSIWYG) design surface in Visual Studio .NET for creating reports in a visual manner by any developer. The design surface simulates graph paper and represents the actual layout of the report elements as they would appear on a printed sheet of paper. The countless wizards and integrated tools help developers to create complex report layouts, style reports, and manipulate data in a fraction of the time these tasks take with other tools.

Take control of your data

Data manipulation is the key in any reporting solution, because it provides business analysts with the insight on the business they are looking for. Telerik Reporting gives you full control over your data, because it makes use of the most popular data sources (OLAP cubes, databases, excel and xml files, business objects, and more) to compile the report you need. By using the provided Visual Studio wizards and tools all data operations such as data aggregation, filtering and slicing, grouping, sorting, conditional formatting, and even styling are effortless.

Reuse legacy reports

Most probably you already have a reporting tool in place, which you have used to create hundreds of reports. Chances are that with Telerik Reporting there is no need to recreate these reports, because they can be reused with the help of the automatic Report Converter Wizard, which supports converting Crystal Reports, XtraReports, and Active Reports to Telerik Reports in minutes.

DELIVERY

Powerful OLAP data processing engine

Telerik Reporting features an intelligent OLAP engine which boosts performance and effectively balances the latest trends of data processing by minimizing the use of both server and client resources. The engine utilizes database-embedded calculations to get the best out of the server's computational power, and then fetches the processed data to the middle tier/client for in-memory storage and further manipulation, taking full advantage of the near-instant data access that random access memory (RAM) provides.

View or embed interactive reports in applications

With Telerik Reporting you can deliver interactive reports directly to your business application, be it a desktop application (WPF, Windows Forms) or web-based (Silverlight, ASP.NET). The reports can be viewed directly in one of the supplied report viewers, where we guarantee the same look of the reports, regardless of the platform; or can be embedded in your application to show the reports directly on the form/page. With the help of the ASP.NET viewer you can view your reports directly in SharePoint and fully leverage the system's advantages.

Get insight on your data with report interactivity

Interactive reports give business users the freedom to explore data in a visual and interactive way in order to gain insight on how aggregates were arrived at, what does each high-level number mean, and drill through the data pertaining to a high level concept. Report parameters can be used to filter data on the fly, show related reports and subreports, and control sorting and grouping. The interactivity features are available in all Telerik Report Viewers (WPF, Silverlight, WinForms, ASP.NET) which help you deliver a rich report environment without worrying about platform limitations.

Render reports to a wide range of formats

Use Telerik Reporting's rendering formats to deliver reports

to the users in your organization in the format they are most used to. Export the report to Microsoft Excel or CSV format if you would like to further manipulate the report data, or simply archive it in PDF format or forward it via email. Export to RTF, MHTML, and image are also supported. You can also print the report if handouts and paper archives are required.

WHAT IS IN THE PACKAGE

Royalty free licensing with source code

Telerik Reporting is the perfect solution for professional creation and viewing of reports. Source code is available with most licenses. Telerik also offers the most aggressive release schedule in the industry with guaranteed three major releases per year.

Outstanding technical support and training resources

To facilitate effortless development experience, Telerik provides a great variety of support resources: demos, self-paced tutorial, videos, extensive online documentation, knowledge base articles, code samples, and more. Telerik also offers superior technical support, for which it is famous industry-wide.

A strong and active community you can rely on

One of the biggest .NET communities on the net is here to help you. Ask a question in the Telerik forums and be sure that either a Telerik representative or one of your peers will come to the rescue.

Enterprise Services

Telerik provides extensive level of support and customized training services designed to help developers advance their knowledge about our products and fully utilize them in their projects, thus ensuring maximum ROI. See more information on Enterprise Services.
