Côte de Blaye

Dear Telerik User,

We're happy to introduce the new Telerik RadWordsProcessing component for WPF. High performance library that enables you to read, write and manipulate documents in DOCX, RTF and plain text format. The document model is independent from UI and does not require Microsoft Office.

The current community preview version comes with full rich-text capabilities including **bold**, *italic*, underline, font sizes and colors as well as text alignment and indentation. Other options include tables, hyperlinks, inline and floating images. Even more sweetness is added by the built-in styles and themes.

Here at Telerik we strive to provide the best services possible and fulfill all needs you as a customer may have. We would appreciate any feedback you send our way through the [public forums](#) or support ticketing system.

We hope you'll enjoy RadWordsProcessing as much as we do. Happy coding!

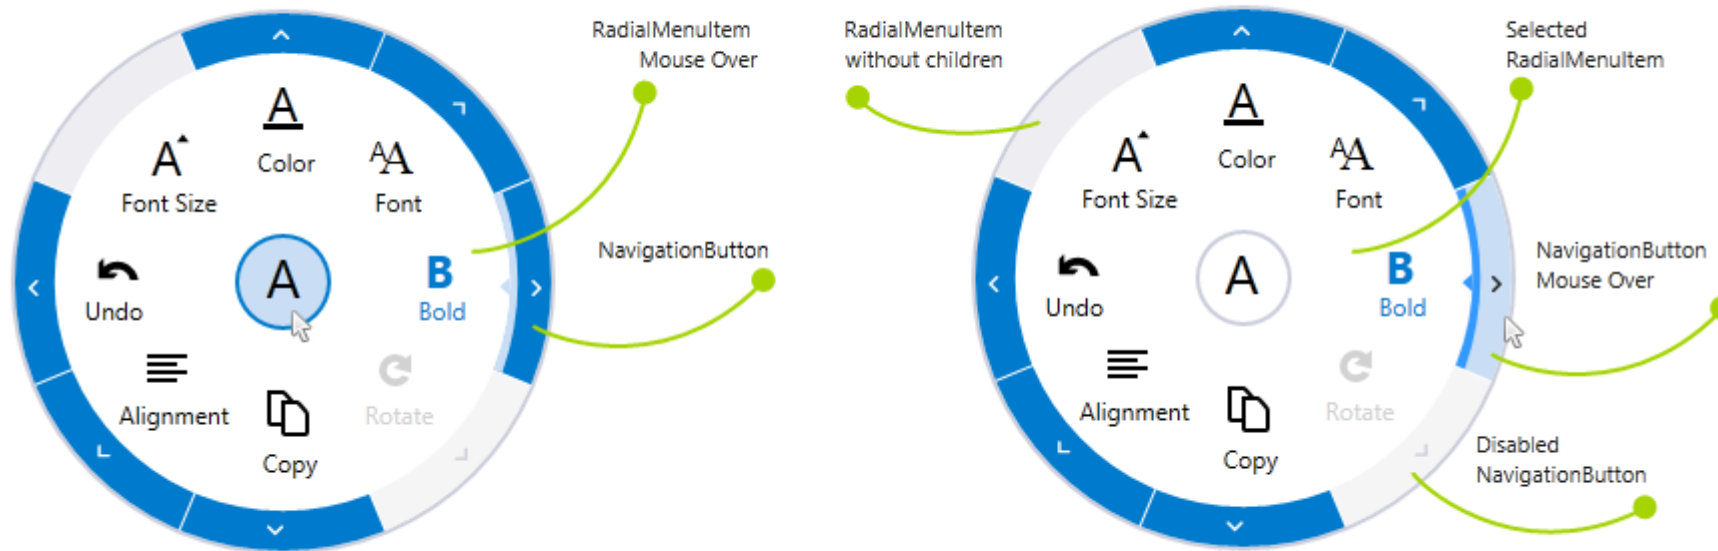

Kind regards,

 Jane Doe
Support Officer

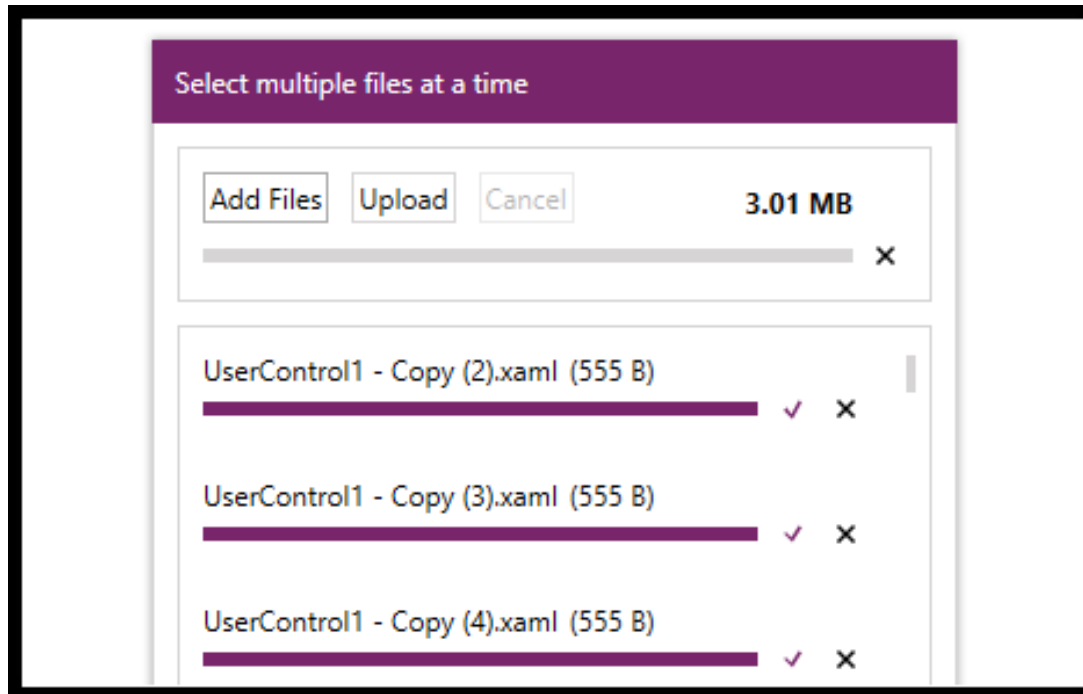

Breakdown of Library vs. Platform

Library	Silverlight	WPF	Asp.Net	WinForms
RadPdfProcessing	Beta	Beta	Beta	Beta
RadWordsProcessing	Official	Official	Official	Official
RadSpreadProcessing	Official	Official	Official	Official

RadRadialMenu (WPF - Beta)

RadCloudUpload (WPF)
