

My StyleName is InfoPanelDashed.

I have inline SOLID but the global style wants to make me DASHED. I should remain SOLID, because my inline value is the stronger than the global style.

I will however take the BLUE background from InfoPanelDashed because I do not have a BackgroundColor explicitly set.

My StyleName is InfoPanelNone.

I have inline SOLID but the global style wants to make me NONE. I should remain SOLID, because my inline value is the stronger than the global style.

I will however take the RED background from InfoPanelNone because I do not have a BackgroundColor explicitly set.
