Expertly Engineered UI Components for Angular Development. No Compromises.
Enhance your existing Angular app, or get a head start with a new Angular project, with our native Angular components. All built from the ground-up designed specifically for Angular.

True Angular UI Components, Built From the Ground Up

We're engineering true Angular UI components, not just wrapping existing components like other vendors. We're dedicated to delivering pure, high-performance Angular UI components without any jQuery dependencies because we won't settle for anything less and we don't think you should either. The Components page contains the most up-to-date list of included UI components.

Kendo UI for Angular Loves TypeScript

Whether you develop Angular applications with TypeScript or JavaScript, look to Kendo UI for Angular for expertly-engineered enterprise-ready UI components for your next Angular project.

Performance and Speed

Our components are engineered specifically for Angular (and beyond!) enabling you to take full advantage of the framework's native performance capabilities like Ahead of Time Compilation (AOT), Angular Universal, and Tree Shaking. When Angular gets faster, we get faster!

Unlimited Product Support

We're proud to provide a support service that our customers love. Kendo UI for Angular offers unlimited support delivered by engineers of the product with a 24-hour guaranteed response time, Monday through Friday.

Installation and Updates

Kendo UI for Angular is installed as discrete, scoped npm packages. It is easy and unobtrusive to get the latest bits, no matter how often you need them, for time-consuming installations. Additionally, you have access to the latest bits immediately after we release them.

We Know UI and Developer Productivity

We created our first UI component 15 years ago. In 2012 we brought you Kendo UI, the incredibly popular UI component suite jQuery used in more than 95,000 public websites and in countless enterprise applications worldwide. Now we're delivering a new edition of Kendo UI engineered from the ground up, designed to help you develop impressive Angular applications in record time.
