

When I added a new record in sub grid, the selected record in parent grid was collapsed and the first record was expanded. See below screen captures:

- 1) Click the “Add new record” button in sub grid of second row:

- 2) The Edit Pop up is shown. However, the second row was collapsed and the first row as expanded.

The data can be added correctly.

- 3) When I tried to edit an item in sub grid, I met the same issue.
